Summary

Full-stack developer with 3+ years of experience building scalable end to end web-based solutions with proficiency in Java/Spring, Go, Python and React. Proven track record of integrating AI/ML services to automate manual workflows, reducing user task-time by 60%. Achieved Rookie of the Year 2023 award for driving productivity gains, reducing errors, and outstanding module ownership.

Skills

Programming: Python, SQL, TypeScript, C#, Java, Go

Databases: MySQL, MongoDB, Redis

Frameworks & Tools: Spring, Spring boot, Junit/Mockito, Git, Docker, AWS, Django, Gin, React, ASP .NET Core, MEF(Microsoft Extensibility Framework), NUnit/Rhino Mocks, Prometheus, Grafana

Work Experience

Applied Materials Pvt Ltd | Senior Software Developer

Jan 2025 - Present

- Architected a generic-based LRU caching provider using redis, achieving a throughput of **10,000+ RPS** for a REST API and reducing database load by **75%**.
- Delivered an end to end error-code dashboard (**Java/Spring, ReactJS, MySQL, MongoDB**) along with a production-grade **RAG pipeline** using **Weaviate** and **Claude Sonnet**, to index unstructured error documentation, reducing process engineer troubleshooting time by **50%** via automated semantic search and response generation.
- Designed a **modular and configurable rules framework** powering high fidelity execution plan screens, allowing seamless addition/removal of editability rules, reducing development efforts by **25+ hours**.
- Enhanced the testing framework with user action recording & script generation, reducing manual testing, with **30%** improvement in code coverage and easier adoption of test driven development.
- Owned a critical software module, tracking **20+ tickets** per release cycle by co-ordinating with stakeholders and delivering **2 major features** ahead of schedule.

Applied Materials Pvt Ltd | Software Developer

Aug 2022 - Dec 2024

- Engineered and maintained self-hosted enterprise systems using Spring Boot, optimizing on-premise server resources with **99.9%** service availability.
- Modernized legacy desktop applications from **WPF to TypeScript/React**, improving navigation flows and reducing user clicks by **50%** through iterative optimization.
- Developed framework improvement by creating **35+ reusable and extensible React components**, improving efficiency and saving **50+ hours** of development time.
- Authored **20+ framework unit tests** in **JUnit/Mockito**, reducing critical bugs by **30%** per month.
- Awarded **Rookie of the Year 2023** for outstanding performance and dedication.

Ellipsonic Pvt Ltd | Backend development intern

Aug 2021 - Sep 2021

- Developed **7+ RESTful API endpoints** in Python/Django using Postman, implemented secure user authentication and authorization flows by integrating Firebase.
- Optimized SQL query execution plans and integrated ORM library to support CRUD operations resulting in a **30%** decrease in execution time.

Projects

Splitzy | Gin/Go, React/TypeScript, Redis, WebSockets

 [Link](#)

- An end to end collaborative bill-splitting application, allowing multi-user sessions for faster individual item resolutions and tally computation.
- Integrated with Google Gemini API for intelligent receipt parsing, automating the extraction of itemized bill items from user uploaded images eliminating manual data entry.
- Powered by an event-driven architecture with live tally calculations and real-time state synchronization via websockets, along with an automated CI/CD testing/deployment via GitHub Actions and monitoring using Prometheus/Grafana.

Education

BNM Institute of Technology

B.E, Information science

2022

CGPA: **8.7**
